

L/R Terry junior, Dean, Robert & Terry senior

McMurdie & Sons – a real family business!

McMurdie & Sons is a small family run business. At the heart of the company are the two Terrys, father and son – affectionately known as - Terry senior and Terry junior. We then have Terry senior's other son Robert and son-in-law Dean. But it doesn't stop there, proudly supporting their husbands are Val, Sirmeeela, Zoe and Lorna and Terry's 5 grandchildren, and with Robert and Lorna expecting a new addition this year, the family keeps growing!

Established plumbers for over 35 years McMurdie and Sons is a reputable family business based in Pinner and Northolt, North West London. We are proud of our high standards, with much of our work acquired through personal recommendations.

- Water softeners

Seasonal Suggestions

With the sun making its presence felt early this year, what a perfect time to start thinking of ways to give your home an extra bit of Spring Cleaning! With so much to think about, let us suggest a few ideas:

Have an outdoor tap fitted or repaired for all your gardening needs.

Let us replace your old leaking/dripping taps.

Does your utility room need refreshing? Have a bathroom make-over. A small change or improvement could change the look of your bathroom, from freshening up your grouting to a spot of re-tiling, an updated shower or a set of new taps.

Give your boiler a service so it's running efficiently and economically ready for colder spells.

Bring life back to your heating system with a Power Flush

Does your system have some of the following?

- Cold spots in radiators
- Radiator cold at the bottom
- Radiator cold at the top
- Blocked pipes and valves due to sludge or lime scale
- Loud banging noises from boiler
- Noisy pipes due to restrictions
- Boiler cutting out due to damaged or blocked pump

A Power Flush will solve these problems.

- More efficient system
- Up to 25% saving on fuel bills
- Better circulation
- Efficient radiators
- Faster heat up
- Rust protection
- Lime scale protection
- Quieter system

The objective is to restore systems with circulation and boiler noise problems (caused by sludge and corrosion deposits) to optimum operation. A power flush removes these deposits and the problems that they cause.

A powerflush is essential prior to installation of a new boiler to eliminate deposits with the new heat exchanger, which may cause premature failure and invalidation of manufacturers warranties.

Soften your water and save!

Mains water in this area is hard. A water softener is a very simple solution to this problem. In your bathroom hard water will cause shower heads to scale up, first sending jets in all directions, then reducing the flow to a trickle. It will also cause your shower door to be covered in spot marks and form scale deposits on your taps. A water softener would prevent these problems.

Soft water is also much nicer to wash in and you will notice the differences too. It will take 50% less soap and shampoo to produce a much better lather. Your hair will be shinier and more manageable and skin will feel softer. Soft water can also greatly improve skin conditions such as dry skin, eczema and psoriasis.

You will also see the benefits in the rest of your home. A shinier kitchen sink and drainer and the need to use much less washing detergent in your washing machine. Also savings on descaling products and dishwasher salt.

There are also unseen benefits. Scale build up in copper cylinders make it work harder and become less efficient, also your pipes become scaled up.

Also in modern condensing boilers, the build-up of scale in the heat exchanger will seriously reduce the boilers efficiency and flow of hot water.

Water softeners fit comfortably under the sink, in a garage or even in loft space and need minimal maintenance. A water softener can last up to twenty years and will pay for itself within five years in lower fuel bills and savings on soaps, detergents and cleaning materials. See our competition to win one for free!
